It will also asks if you want the map on the site to "localize" for you.
Your premise will be at: bison.herddogg.com/**Premise-Name** for future reference.

About the Bison App

The service is oriented around animals (paired to tags),
sites (paired to readers with GPS) and users but the epi-center of the service is the animals.
For the bison program, you can create animals, add offspring and so forth
but most of the data inputs will be derived from the work done in field with the mobile app.

Feel free to try things out!
